Lea the Scroll-to-Style Explorer

Screening Question:
When you discover fashion items, do you mostly use your phone, prefer quick visual browsing (scrolling/swiping), save items you like, and open the store page only when something really interests you?

Persona Description:
Lea is a 21-year-old student who uses her phone as her main device for fashion discovery. She enjoys trends and visual inspiration, but she dislikes jumping between many web-shops and losing track of items she liked. She wants a fast, personalized experience that feels more like social media than traditional online shopping. She often browses for inspiration, saves favorites, and decides later whether to buy. This fits Wardrobe's MVP well because it focuses on a swipe-based feed, personalization, favorites, sharing, and linking to the original store page.

Thinks	"Fashion discovery should be quick, fun, and tailored to my style."
Sees	Too many scattered web-shops, repeated products, irrelevant recommendations, and endless scrolling across different apps.
Feels	Excited when she instantly finds something that matches her taste, but frustrated when shopping becomes slow, messy, or overwhelming.
Does	Browses in short mobile sessions, swipes quickly through products, saves favorites, shares items with friends, and opens the brand page when she is ready to consider buying.

Problem Scenario & Value Proposition

Problem Scenarios	Current Alternatives	Your Value Proposition
Lea wants to discover fashion across multiple brands but does not want to open many different web-shops.	Opening multiple web-shops, browsing Instagram, searching manually on Google, following influencers.	Wardrobe offers a mobile-first, swipe-based feed that brings products from different brands into one place and improves through likes and skips.
Lea feels bored and wants to buy something but she does not know exactly what item she is looking for,	Random scrolling on Instagram or TikTok, visiting random web-shops, browsing without direction.	Wardrobe shows one product at a time in a personalized yet slightly unpredictable feed, making discovery engaging and exploratory.
Lea often saves items but loses track of them across different apps and stores	Taking screenshots, saving links in notes, bookmarking multiple sites.	Wardrobe allows her to save favorites in one organized place and easily return to them when she is ready to buy.

Lea values social influence and likes seeing what her friends are interested in.	Sending screenshots in group chats, asking friends directly, sharing Instagram posts.	Wardrobe enables sharing, liking, and seeing what friends save, creating a social and more trustworthy discovery experience.

Mark, The occasional shopper

Screening Question:
Do you only buy clothes or accessories when you need them rather than regularly browsing fashion content?

Persona Description:
Mark is a 35-year-old office worker. He dresses neatly but practically—jeans, polo shirts, casual sneakers, or dress shoes depending on the occasion. He doesn't actively follow fashion trends but wants to look presentable and stylish when needed. Mark often forgets which stores have what he wants, and he finds it frustrating to scroll through endless online catalogs. He values simplicity, efficiency, and curated recommendations. He's more likely to shop when an event, work meeting, or special occasion requires it. He usually shops on weekends and spends as little time as possible online searching for the right item.

Thinks	"Find the things you need quickly and efficiently, without spending unnecessary time."
Sees	Complex websites with overwhelming product lists and ads for items he doesn't care about, as well as friends sharing trendy fashion that doesn't feel relevant to him.
Feels	Frustrated by the time-consuming nature of online shopping but relieved and satisfied when products are easy to find.
Does	Shops online only one or two times per month, primarily for work or special occasions, using search filters and curated lists to quickly narrow options, and saves or purchases only the items that clearly fit his needs.

Problem Scenario & Value Proposition

Problem Scenarios	Current Alternatives	Your Value Proposition
Mark has an upcoming work event and needs a formal shirt. Since he shops only occasionally, he finds it frustrating to search through multiple online stores filled with hundreds of similar items. The process takes more time than he is willing to spend, and he often feels unsure whether he has chosen the best option.	Mark typically searches for shirts using Google or visits a few familiar online fashion stores. He manually browses categories, applies filters, and compares prices and styles across different websites. This	Wardrobe provides Mark with a personalized and curated feed of formal shirts based on his preferences. Instead of manually browsing multiple stores, he can quickly swipe through relevant options, view essential product details, and open the original store page

	approach requires opening many tabs, navigating different interfaces, and repeatedly entering search criteria.	when ready to purchase, significantly reducing the time and effort required.
Mark wants to buy casual clothes for everyday or weekend use but does not actively follow fashion trends or social media influencers. He often delays shopping because browsing through large product catalogs feels unnecessary and overwhelming, even when he clearly needs new clothes..	In this situation, Mark usually returns to the same few online stores he already knows or buys items without much comparison. Sometimes he waits until a physical store visit becomes necessary. These alternatives limit his exposure to better options and still require time and effort, which discourages him from shopping efficiently.	Wardrobe offers Mark a simplified discovery experience by presenting a small, relevant selection of casual clothing tailored to his style and budget. The swipe-based interface allows him to find suitable items quickly without engaging with trends, making occasional shopping faster and more comfortable.

Inna, the social fashion connector

Screening Question:
"Do you often share fashion items with friends, ask for opinions before buying, or send links/screenshots of outfits in chats?"
Persona description:
Inna is 20 years old and studies Communications. She is very active socially and enjoys discussing outfits and trends. Fashion for her is not only about buying clothes, but also about interaction and experience sharing.

She frequently sends screenshots of items to group chats, asks for opinions before purchasing, and shares links. She enjoys discovering items, but what excites her most is reacting to them together with others.

She is happy with the social side of fashion discovery. She wants to see what others like, what is trending among her circle, and what products are being shared.

Thinks	"Fashion is more fun when I can share it and see what others think."
Sees	Friends posting outfits, sending product links, reacting to styles, and influencing each other's choices.
Feels	Excited when friends approve her picks, curious about what others are liking, and confused when she

	shops alone without interaction.
Does	Shares product links in chats, screenshots items, asks for feedback before buying, reacts to friends' fashion posts, saves items to discuss later.

Problem Scenario & Value Proposition

Problem Scenarios	Current Alternatives	Your Value Proposition
Inna finds a fashion item she likes but wants feedback from friends before buying. Sharing links between different websites feels messy and unorganized.	Sending screenshots in group chats. Copy-pasting product links from multiple webshops. Posting Instagram story polls.	Our app allows users to share products directly inside the app. Friends can react, comment, or like items in one place.
Inna is curious about what fashion items her friends are saving or liking. She wants to see trends within her society.	Asking friends directly in chats. Scrolling through social media posts. Meeting in person to discuss shopping ideas.	Wardrobe introduces a social feed where users can see what friends like, save, or share.
Inna enjoys discovering new brands but prefers discovering them through people she trusts rather than random ads.	Following influencers on Instagram. Browsing hashtags. Clicking targeted ads.	The app combines personalization with social signals (likes, shares, saves from friends). This makes discovery more relevant and trustworthy.
